Thus the system can be easily expanded to control highly sophisticated experiments.c) Electrically quiet. Unlike the competition, our multi-unit controller employs linear output circuitry. Possibility to add additional manipulators to the same controller without requiring potentially noisy chopper drives.d) In manipulators, the 4th axis can be set up and changed without the need to connect an external computer to download and configure software. A separate configuration is allowed for each output on this manipulator controller. If desired,	01

each manipulator can approach the prep at a different angle from the horizontal. The 4th axis can be configured between the X and Z axes or the Y and Z axes (useful when manipulator is rotated 90 degrees relative to the preparation).

- e) Faster automated pipette exchange. Automation is set up and run via the same interface used in controller; however, the speeds of the automated movement are much faster.
- f) Accelerated manual mode. This mode can be fully disabled if needed for direct control of the pipette.

8. Micromanipulator

- Precision motorized micromanipulators, mechanical offers advanced features found in manipulators costing thousands more. Custom engineered stepping motors, precision cross-roller bearing slides and proprietary worm gear capstan drives form the basis of the watch-like mechanical system. Possibility for Pipette holders and headstages to be securely mounted with rigid mounting systems.
- The extremely low backlash removes traditional drawbacks of “open loop” technology and eliminates drift. This allows submicron resolution down to 0.2 microns in the coarse range and down to 63 nanometers in the fine range. With over 1 inch of motorized travel on all three axes, and a user designated 4th axis, that allows tremendous range of motion while maximizing resolution.
- Additional components can be added at any time, allowing the user to develop a system tailored to his or her particular needs. The controller is self-detecting so there is no need for manual configuration of the components.

9. FEATURES

- a) Quietest electronics in the industry optimized for single channel recording
- b) Single controller and ROE will run two stepper motor drive manipulators
- c) Self-detecting, daisy-chain capability allows control of four manipulators from one ROE
- d) User-friendly interface: single button access to all major functions
- e) Easily configurable virtual 4th axis set without external computer
- f) Accelerated Mode for fast, manual manipulator movement
- g) Easy toggle selection of Mode (speed/resolution, pulsed diagonal, Accelerated Mode)
- h) Display indicates X, Y, Z coordinates, Mode, active manipulator
- i) Robotic Home and Work Position moves for easy automated pipette exchange
- j) Faster robotic moves than previous versions
- k) Definable 4th axis for coaxial pipette movement, angle selected by DIP switches
- l) Simple USB interface
- m) Toggle switch selects which manipulator is connected to input device
- n) LED and display indicate active manipulator
- o) Ultra-low drift, ultra-smooth movement
- p) Low-drift mechanical stability
