Sr	Description	Qty
01	RF Cage for STM Lab <ul style="list-style-type: none">The cage must be self -supporting and made up of high quality acoustic material. The desired level of acoustic isolation is STC 45-55. This must be tested and guaranteed for the material. Test certificates must be provided along with the quote.The enclosure must attenuate high frequency electromagnetic noise (with no metallic penetration). The desired attenuation is 80-100 dB at 10 GHz.Physical dimensions: Total length of the enclosure will be 8.5 meter and width will be 6.2 meter. The ceiling clearance inside the enclosure must be at least 5.4 meter.The floor inside the cage must be made of non-magnetic material (preferably aluminum). The area inside the STM pit will have to be covered with 3 mm thick copper sheet.The cage must be electrically grounded with a dedicated ground.Doors: Two acoustic and RF-shielding doors each 8' tall and 6' wide (clearance) will have to be provided. The doors must also meet the desired (above mentioned) acoustic and RF attenuation level.Room should be provided to run electrical power lines, vacuum lines, gas lines, water lines etc. in and out of the enclosure without compromising on the acoustic performance. The number of penetrations will be discussed during the design stage of the enclosure.One electrically controlled heavy duty hoist (capacity: 1 Ton) with remote controller must be provided inside the enclosure. The electrical connection to the hoist must be provided by the vendor.Necessary mechanism must be provided to ensure continuous flow of fresh breathable air inside the cage.The vendor will have to finalize the drawing and get the same approved by the scientists at IISER Mohali before they start manufacturing.All the materials used in this cage must be fire proof.The vendor must also submit at least two certificates from reputed Govt. academic institutes where they have performed similar job successfully.	01
